please note my comments for the record on the pending settlement of the Microsoft anti-trust suit.

the Justice Department is not representing my interests with this proposed settlement.

i prefer a settlement which promotes consumer choice and quality software. the proposed settlement does not do that; it does not significantly alter the conditions that Microsoft has illegally exploited.

if this settlement takes effect, i believe Microsoft will again take illegal action in the market because when the penalties are so light, Microsoft can make more money up front than it will lose during the next protracted litigation cycle.

please don't make breaking the law profitable for Microsoft.

-thank you-
